

j-AIWG

Education Group April 6, 2026

Action Items from Previous Meeting

- Enterprise AI Patterns – Lize is working on an enterprise AI Patterns document.
- Educators @ Devnexus
 - <https://ai4jvm.com/> & <https://foojay.io/ai/>
 - YouTube for Junior Developers – Create foundational videos to help them get started. Consider practical “bread and butter” topics.
 - “What is AI?” Content – Gather and group articles covering:
 - Context
 - Capabilities beyond LLMs
 - Terminology
- Newsletter – Add a tutorials section.

EDUCATORS
@
DEVNEXUS

Notes

- Move J-AI article aggregate information to a new site?
 - Can we use James Ward site ai4jvm.com?
 - Is it is just to promote their book?
 - Let's ask him.
 - How do we publish
 - Make sure it is not Amazon sponsored
 - Do we need a new site since Foojay's future is in doubt
 - Do we need to publish to Github instead?
 - Eyal.. AI4Java.com site is this an option?
 - Domain name for Java is Oracle. May need to change the name if we want to use it.
 - Use Eyal's machine learning material and place links or material on the new site.
- AI Necromancers
 - Post in discord what is interesting in the AI spaces. Give Java presence on AI in reddit etc.
-

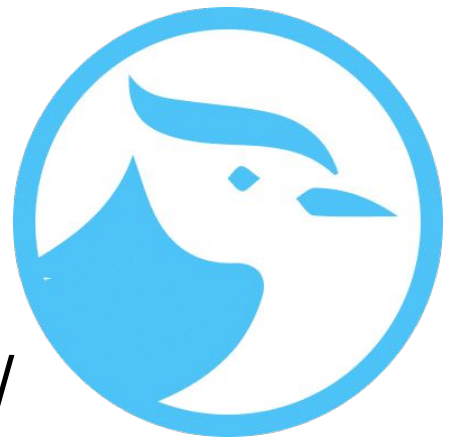

Notes

- Update Educators with Devnexus
- Educators have issue with Students using AI without understanding what they are writing
- What does the future hold for developers?
- Students taking CS courses is dropping off at the secondary and university level.
- Getting the tooling to work in a predictable manner is engineering
- How to Vibe properly is a skill
- Use ArchUnit to complement the AI to help it generate the code.
- Human in the loop is still a required.
- Industry let down the educators.
 - Industry has laid off so many developers (we don't need you anymore)
 - Blaming AI
- Universities went to training instead of education. We need CS Education

Notes

- What do we tell Educators to encourage students
 - This is a major shift in the industry as big as internet
 - Problem solving
 - Building systems
 - The way we build things is different.
 - Be the explorer
 - Foundational tech is so important
 - Low level
 - Sequence & UML diagramming
 - Kids watch youtube
 - Lot's of trash out there.
 - Growing thread of folks pushing back against AI
 - Use critical thinking
 - Algorithmic thinking for Java
 - Problem solvers to build those systems
 - You have to be the explorer to know what algorithms solve the problem.
 - Ecosystem
 - It is not Language alone its the tooling around
 - Community. Try to get the students to show up.
 - Human connection is more important than ever.

Foojay
